

SCIENCE CLUB

February 2010

2/1

Hamsters

Angelina has us running in circles on the exercise wheel. What makes these little nocturnal rodents do that?

2/8

Getting the 787 off the Ground

Boeing engineers have been working on several problems that need to be solved before Boeing's newest plane can take flight. Today we are exploring some of the factors involved in the principles of flying and will try to get our model 787s to fly.

2/15

Mid- Winter Break

I'm off to use applied physics on the ski slopes. I hope that gravity doesn't come into play too much or I might have to "bone" up on my anatomy. Maxine plans to apply one of Newton's Laws in the study of a body at rest. Look around this week and see how often science happens to you.

2/22

River Otters

Matthew is going to get us swimming in the river with these playful creatures.

Coming up in April: Sleepover at the Museum of Flight 4/23.
