

SCIENCE CLUB

March 2010

3/1

Hamsters

Angelina and Debbie now have their schedules in correct (I hope) and we are ready to join the rodent circus!

3/8

Locks

No, Karl is not interested in security. He is interested in the structures that move ships from one body of water to another when those bodies of water are at different heights. What an uplifting day we are going to have.

3/15

It's a Drag

We have already explored how weight, lift and thrust help us get airborne. Nolan is going to shown us the aerodynamics needed to cut drag on our spaceship. It is a long way to Mars and we will need to conserve fuel. (Might be helpful information on Earth, too.)

3/22

Acid / Base Titration

Ruby is using her interest in chemistry to start our skills training for our Mars adventure.

3/29

Spring Break--Enjoy

Our blast off date to Mars is April 23. Pre flight training continues next month.
