

SCIENCE CLUB

October 2011

10/3

Flying Marshmallows

I have leftover marshmallows from summer s'mores. Need I say more?

10/10

Destructology

I have a book full of experiments that involve smashing, dropping and crashing things. So of course, we must.

10/17

Glaciers

Bring your gloves again today. We are going to experiment with lots of ice as we study the creation and movement of glaciers and how they have changed the landscape of our area.

10/24

This is how we do it

Sterling will be in charge today. He is an experienced Club member who will be presenting a unit that will give some great ideas on how to research, organize, and lead the class. Not to be missed!

10/31

Halloween—No class

Class is canceled tonight due to rumors of zombie attacks.

Remember: Usborne Book Fair 10/13-10/14 in the science room. There are terrific science books that make great birthday or holiday gifts.

Science parents welcome. Please stop by.
