

SCIENCE EXPLORERS

October 2011

10/3, 10/5

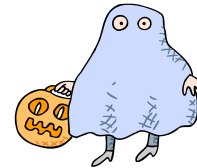

Smell and Taste

We are going to explore the inner relationship of these two senses. Come ready to try some new tastes and analyze some familiar ones. Find out why cats don't go crazy for chocolate chip cookies but Debbie does.

10/10, 10/12

Guts and Gizzards

And all other innards. We unzip the human body and find out what's inside. We slide down the digestive tract, visit a few essential organs, and try to figure out how it all fits together.

10/17, 10/19

Bones

Time to bone up on some cool body facts. Bring a clean chicken bone with you today if you can. (I have extra for those who don't have chicken on their menu.) We could use parents willing to do some cutting and a classroom volunteer this week.

10/24, 10/26

Owls-Predators of the Night

By dissecting owl pellets, we will find out what was on the owl buffet. A true treasure hunt awaits us.

Remember: Usborne Book Fair 10/13-10/14 in the science room... there are great science books that make terrific birthday and holiday gifts. Science parents welcome. Please stop by!

Field trip coming up on Oct 31 or Nov 2 to the Lake Hills Greenbelt.
