

SCIENCE CLUB

November-December 2011

11/7

Candy Science

Bring in four different pieces of candy from your weekend Trick or Treating. We will calculate the total amount of sugar gathered and then test for other chemicals in the goodies.

11/14

Max is being reactive.

Debbie has a new chemistry book. Max loves chemistry. Sounds like the perfect formula for a few reactions.

11/21

Megalodons

Samuel loves all things shark. This extinct shark is considered one of the most powerful predators ever. Glad I wasn't swimming during the Cenozoic era.

11/28

Musical Vibrations

Emma and Natalie are planning to explore some sound variations. I hope they make beautiful music together.

12/5

All the colors of the world

Shoshana and Ava are using chemistry and botany together to help us understand the world of natural dyes.

12/12

Red Tail Hawks

You see them by the freeway and in the local trees. Autumn is going to send us soaring with one of our local raptors.

We are closed for the Holidays December 19-January 2. See you 1/9.
