

SCIENCE CLUB

February 2012

2/6

What should we pack?

Airlines aren't only ones with a limit on weight and size of bags. We must make some hard choices as we decide what we should take and what we should leave behind on our two year mission to Mars. Bring one or two items today that you feel you must take with you on this long voyage.

2/13

The Teachers Teach

A surprise day from Maxine and Debbie. It is so secret even we don't know what we are going to do! (Double Blind study!)

2/20

Mid- Winter Break

I'm off to use applied physics on the ski slopes. I hope that gravity doesn't come into play too much or I might have to "bone" up on my anatomy again. Maxine plans to apply one of Newton's Laws in the study of a body at rest. Look around this week and see how often science happens to you.

2/27

Animals that squirt

Noah is interested in all types of animals that use the squirting of liquids for protection, be it camouflage or a toxin. He is going to educate us on the great variety of animals and their unique forms of protection.

Coming up in April: Sleepover at the Museum of Flight 4/27. The fee of \$95 for each child and their chosen adult is now due.
