

# SCIENCE INVESTIGATORS

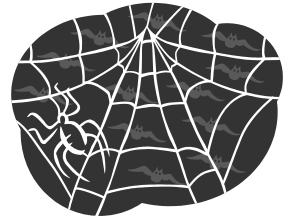

## November 2009

11/4

### Step into my Parlor

They have two body parts, eight jointed legs and multiple eyes in common. But these predators use many different techniques to hunt, trap and kill their prey. Tonight we are going to think like a spider in order to capture our nourishment.

11/10

### Inertia

Sir Isaac Newton was probably the bossy kid who liked to make up all the rules on the playground. When he grew up he still liked to make up the rules. Today is all about his first law of motion, also known as the “Law of Inertia”. If this doesn’t work, the janitor is going to be pretty mad!

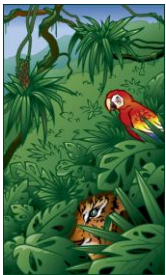

11/17

### The Plants and Animals of the Rainforest

We will learn about this endangered habitat and what its loss would mean to us. Snack today will be a rainforest salad.

11/24

### Tropical and Pacific Northwest Rainforests, continued

Listening to the sounds of the rainforest, we make rainforest cookies.

Happy Thanksgiving to all!
